

IdeaBoardz

- virtual whiteboard
- no login necessary although makes it easy to manage multiple boards
- easy to create your board which will then generate a shareable URL
- best to share the link via email as sharing via the chat feature in Zoom doesn't work properly for all users
- can create "sections" in your board which is similar to tabs in Excel so you can view/work on multiple topic areas in one white board. This also allows multiple groups to work on the same board but in their own section.
- board can be exported into PDF or Excel
 - board can only be exported in its entirety rather than by sections
 - votes per note are showed in the export
 - pdf format is very reader friendly and a great way to showcase the information that could be used in follow up discussion
