

**Ankita Agarwal: PCCM, research track**

**Chief Fellow 2020-2021**

If you are in a specific track/program, what opportunities has your track/program given you?

I chose the research track and am doing clinical research in critical care looking at the association between burnout and workload. This track allowed me to pursue the Masters of Science in Clinical Research (MSCR) in my third year. My hope is that it helps me further my career to becoming a physician scientist.

Hobbies/favorite thing to do in Atlanta?

Walking around Piedmont Park in Midtown – it's always full of people and there are music festivals and food festivals that take place (not just there, but around the city as well). It's made Atlanta become home!

**Fadi Rabih: PCCM, clinical track**

If you are in a specific track/program, what opportunities has your track/program given you?

I am interested in pulmonary vascular disease and looking forward to becoming a clinician educator. The program leadership is flexible and helpful in making sure I am equipped with the tools I need to build my career.

Hobbies/favorite thing to do in Atlanta?

I am a husband and a father of one boy who we were blessed to have during my second year of my fellowship. I do not have any family in Atlanta, but the program and my co-fellows were very supportive during this tough and amazing time. With regard to fun things to do in Atlanta, if you are a soccer fan, Atlanta is the place to be! I play soccer once a week or once every other week with a group of fellows. If you love hiking and enjoy the outdoors, there are plenty of opportunities in a 20-mile radius of the city.

**Ashley Binder: PCCM, clinical track**

Why did you choose to train at Emory?

I chose Emory because they had both research and clinical tracks, rather than a one size fits all research track for everyone. I also liked that training is spread across multiple hospitals, each with a different feel, acuity, and health population.

Hobbies/favorite thing to do in Atlanta?

Ponce City Market's rooftop, brunches with my girlfriends, and day parties.

**Becca Kapolka: PCCM, clinical track**

What is your favorite thing about our program?

The variety of training sites provides exposure to a wide range of pathology, practice styles, and hospital settings. I feel like Emory has prepared me for pretty much any clinical experience going forward.

Hobbies/favorite thing to do in Atlanta?

Exploring Atlanta's vast network of walking and hiking trails with my dog, Emmy Lou.

**Josh Detelich: PCCM, research track**

Why did you choose to train at Emory?

One of the reasons I chose to train at Emory was for the opportunity to participate in the MSCR program. I had very little research experience coming in and wanted to use fellowship as a way to gain knowledge and skills in clinical research which I plan on incorporating into my future career.

Hobbies/favorite thing to do in Atlanta?

One of my favorite things to do is explore the many small music venues scattered around the town and listen to shows from smaller local bands to even some more nationally recognized names. Atlanta seems to have a significant number of these places that offer a great vibe to listen to a concert in a more intimate and relaxed environment (pre-pandemic of course).

## Third Year Fellows 2020-2021

**Philip Yang: PCCM, research track**

Why did you choose to train at Emory?

I was interested in research, so the opportunity to pursue the research track and the MSCR program was a huge plus. I also wanted the broad and diverse clinical exposure from the different hospitals, each with its own unique characteristics. Emory offers the best of both worlds!

Hobbies/favorite thing to do in Atlanta?

Running and cycling around the Piedmont Park and the Beltline, hiking in dozens of state parks around Atlanta, going to the Atlanta Symphony.
